

**Universitatea de Vest
din Timișoara**

Postul: Asistent de cercetare

Poziția: 12

ICAM: Departamentul de Cercetare Științifică în Fizică

TEMATICA PENTRU PROBA TEORETICĂ

1. Legea lui Planck si densitatea spectrala a fluxului de energie solara
2. Transferul radiativ in atmosfera. Modelarea iradiantei solare spectrale
3. Integrarea ecuatiilor spectrale. Modele parametrice pentru estimarea iradiantei solare in conditii de cer senin
4. Spectre solare de referinta si cuantificarea deviatiilor
5. Estimarea energiei solare. Ecuatia Angstrom
6. Masurarea marimilor radiometrice (componentele iradiantei solare, durata de stralucire a soarelui)
7. Caracteristici spectrale si de banda larga ale celulelor solare cristaline
8. Cuantificarea pierderilor de energie PV datorita modificarii spectrului radiatiei solare

TEMATICA PENTRU PROBA PRACTICĂ

1. Construcția unei baze de date radiometrice
2. Elaborarea unui model parametric de iradianță solară pe baza unui model spectral
3. Evaluarea pierderilor de energie PV datorită modificării spectrului radiatiei solare
